

TumourScope AI — Research Analysis Report

Research prototype. Image-derived measurements only; not a validated medical diagnostic system.

Across 5 analyzable time point(s), the measured spheroid-like region area changed by -93.4% for Earth control and -99.0% for Microgravity. The first analyzable pair had an average detection confidence of 70%. These are image-derived research measurements, not a medical diagnosis.

Day	Earth diameter (μm)	Micro diameter (μm)	Earth area (μm ²)	Micro area (μm ²)	Area change %
Day 1	53.00	59.50	1712.00	2213.88	+29.32%
Day 2	6.50	9.00	30.12	38.50	+27.82%
Day 3	6.50	6.50	26.12	25.88	-0.92%
Day 4	8.50	6.50	23.50	27.50	+17.02%
Day 5	13.00	6.50	112.75	21.25	-81.15%

Day 1: detection and quality notes

day1_earth: confidence 68%, quality 100%; no major warnings
day1_micro: confidence 71%, quality 100%; no major warnings

Day 2: detection and quality notes

day2_earth: confidence 79%, quality 100%; no major warnings
day2_micro: confidence 70%, quality 100%; no major warnings

Day 3: detection and quality notes

day3_earth: confidence 76%, quality 100%; no major warnings
day3_micro: confidence 78%, quality 100%; no major warnings

Day 4: detection and quality notes

day4_earth: confidence 50%, quality 100%; warnings: Low-confidence spheroid detection
day4_micro: confidence 74%, quality 100%; no major warnings

Day 5: detection and quality notes

day5_earth: confidence 75%, quality 100%; no major warnings
day5_micro: confidence 70%, quality 100%; no major warnings
